SUMMARY

Backend Engineer with 4 years of experience in fintech and core banking systems, specializing in distributed architectures and microservices-based solutions. Proven track record in modernizing legacy .NET Framework applications to ASP.NET Core, improving system scalability, performance, and maintainability. Experienced in designing high-availability, fault-tolerant systems leveraging gRPC, RabbitMQ, and API Gateway patterns. Strong advocate of clean architecture, SOLID principles, and performance optimization in high-throughput transactional environments.

I am also open and ready to work onsite with clients internationally to support project delivery and cross-border collaboration.

My career objective is to transition into a Technical Lead role, where I can leverage my expertise in enterprise system design while mentoring and guiding development teams to deliver scalable and high-performance solutions.

TECHNICAL SKILLS

Programming Languages: C#, SQL, TypeScript, Java, JavaScript

Frameworks/Platforms: ASP.NET Core, Entity Framework, React Native

Database Management Systems: MS SQL Server, Oracle

Tools and Technologies: RabbitMQ, gRPC, Redis, GitHub/GitLab, IIS, Docker

PROFESSIONAL EXPERIENCE

VietUnion Online Services Corporation (Payoo) – .NET Developer

Apr 2025 – Present

Key Contributions:

- Delivered backlog features for core payment services
- Refactored and enhanced legacy WCF (.NET Framework) services
- Migrated backend services to ASP.NET Core following modern RESTful architecture
- Improved performance, maintainability, and scalability of existing systems
- Conducted code reviews and enforced coding standards
- Optimized QR code generation API under high-concurrency load testing (JMeter), reducing average response time from ~30s to ~5s

Technologies: C#, .NET Framework, ASP.NET Core

Projects: QRCode, POS, mPOS, Pay4Biz

JUST-IN-TIME Solutions - Software Developer

Oct 2022 - Apr 2025

Onsite experience: Provided onsite technical support in Myanmar for deployment and production issue resolution

Project: Teller Core Banking Application, Smart OTP Application

Secure authentication and transaction processing system for banking operations.

Technologies: React Native (TypeScript), ASP.NET Core, SQL Server, RabbitMQ, Redis

Responsibilities:

- Designed and developed secure OTP authentication and teller transaction APIs
- Integrated services with core banking systems
- Implemented JWT-based authentication and request validation
- Contributed to internal framework enhancements and performance optimization
- Conducted code reviews to maintain quality and security standards

Project: Neptune Corebanking System

High-performance core banking platform supporting multi-channel transactions.

Technologies: ASP.NET Core, SQL Server, React, RabbitMQ, gRPC, Docker, II

Responsibilities:

- Developed and optimized microservices for banking processes
- Integrated distributed services via gRPC and message queues
- Deployed and maintained applications on IIS
- Supported operational stability and onboarded new team members

Project: Optimal9 Core Banking System

Legacy core banking platform.

Technologies: Java, Oracle, VB.NET

Responsibilities:

- Maintained legacy system and resolved production issues
-

FREELANCE EXPERIENCE

Microservice Orchestration Platform – System Architect

2025 – Present

Designed and implemented a distributed microservice orchestration platform to manage service routing, workflow execution, and inter-service communication.

Technologies:

ASP.NET Core, gRPC, RabbitMQ, YARP, C# Source Generators, Docker

Responsibilities:

- Architected orchestration flow for distributed services
 - Designed synchronous (gRPC) and asynchronous (RabbitMQ) communication patterns
 - Built API gateway layer using YARP Reverse Proxy
 - Implemented compile-time optimizations using Source Generators
 - Owned end-to-end system design and performance optimization
-

PERSONAL PROJECT

Project: LinKit.Core**Description:**

A lightweight utility and core abstraction library for .NET applications, designed to simplify common development patterns and improve code reusability across projects. Published as a public NuGet package.

Technologies:

C#, .NET Standard/.NET, NuGet Package, Expression Trees, LINQ Extensions

Responsibilities:

- Designed and developed reusable core components for .NET applications
- Implemented utility extensions and abstractions to improve developer productivity
- Structured project following clean and modular design principles
- Packaged and published library to NuGet for public distribution
- Maintained versioning and documentation

NuGet: <https://www.nuget.org/packages/LinKit.Core>

Project: Bon framework

- Microservices framework built with .NET
- Implemented essential database functionalities using ASP.NET Core and Entity Framework Core
- Added functionality to resolve services and integrated RabbitMQ for messaging.

GitHub: <https://github.com/linhnq0520/Bon>

EDUCATION

University of Science - VNUHCM, 5/2022 - 11/2022

Java programming certification

University of Economics Ho Chi Minh City, 7/2017- 5/2021

Bachelor of Commercial Business
